CAREER OBJECTIVE

Results-driven Data Analyst and Engineer adept at building resilient ETL pipelines, designing scalable relational models, and extracting actionable business intelligence. Highly skilled in leveraging advanced Python, SQL, and AI Orchestration to optimize data infrastructure, automate complex workflows, and transform raw datasets into strategic insights.

EDUCATION

BE Computer Science 08/2023 – Present
Chandigarh University
8.18 CGPA

SKILLS

Data Engineering & Architecture ETL Pipeline Development, Star Schema Design, Incremental Loading, Checkpointing, Relational Data Modeling	AI Orchestration & Gen AI AI Orchestration (Antigravity), Gen AI Workflow Automation, Advanced Prompt Engineering, AI-Assisted Development
Programming & Databases Data Quality Assurance, Exploratory Data Analysis (EDA), Exception Handling, Technical Documentation, Stakeholder Communication, Version Control (Git).	Business Intelligence & Analytics Azure Cloud Services (Familiarity), Model Productionization, ETL Pipeline Execution, Large Dataset Processing, JSON, Parquet

PROJECTS

Tech Graveyard: Corporate Product Lifespans & Sunset Analytics  <i>Python, PostgreSQL, Power BI, Pandas, SQL, Star Schema</i> - Architected an end-to-end data pipeline to ingest, standardize, and transform messy corporate product data into a robust relational Star Schema. - Developed complex SQL analytical queries utilizing window functions and conditional aggregation to quantify business metrics like Sunset Velocity and CEO Patience Index. - Designed an interactive Power BI dashboard featuring dynamic drill-downs and cross-filtering to visualize product mortality correlations against annual revenue growth.	08/2026
Steam Market Intel — Production ETL Pipeline  <i>Python, Pandas, PostgreSQL, psycpg2, SQLAlchemy</i> - Engineered a production-grade ETL pipeline processing 27,000+ records into a PostgreSQL database with automated null handling and feature engineering. - Implemented highly resilient pipeline architecture featuring idempotent runs, watermark-based incremental loading, and stateful checkpointing. - Ensured zero data loss and system reliability by designing exponential backoff retry logic for all database operations and detailed, levelled logging.	05/2026
Sentiment Analyzer  <i>Python, YouTube Data API v3, VADER, PyArrow (Parquet), Pandas</i> - Engineered an automated ingestion pipeline using the YouTube Data API to extract unstructured social media text data and measure audience engagement. - Applied natural language processing (VADER) to quantify emotional responses, aggregating sentiment metrics that reflect real-world audience perceptions. - Optimized downstream analytics and storage efficiency by transforming and exporting behavioral data into the Parquet format.	08/2026

CERTIFICATES
